

BirchAI

Birch.ai – Founding Engineer

Who We Are:

The small but mighty team at Birch.ai is looking for entrepreneurial engineers who will build transformative healthcare solutions. Together, we will take the paperwork out of healthcare, and you will be instrumental in shaping products that healthcare stakeholders, such as doctors, love to use.

Benefits:

Work with a team that is on the bleeding edge of technology in the NLP space while improving the patient experience for all. Do that from home with a flexible schedule, and a competitive salary. And yes, you can earn your way into a good chunk of equity.

Responsibilities:

- Lead the process to define the core backend infrastructure for our initial product, and beyond. That includes establishing our technical and design requirements, and setting up a HIPAA-compliant cloud environment
- Write top-notch, reusable code yourself as we build out the team
- Build highly scalable, functional and sustainable applications
- For now, focus day-to-day on coding, troubleshooting, and debugging. But be capable of leading the Production Engineering team as it grows
- Collaborate with Front-end developers
- Provide training, help and support to other team members
- Stay current on new technologies and best practices

Requirements:

- Python, Django, and experience architecting and adapting to emerging client needs
- 3+ years of experience
- Be familiar with AWS / Azure / GCP other cloud technologies
- Experience with WebRTC
- Understand GPU and CPU parallelism optimization
- Have a working knowledge of deep learning models
